

The AODA in Action: What You Need to Know

 Ontario Universities' Application Centre

The power of the Web is in its universality.
Access by everyone regardless of
disability is an essential aspect.

Tim Berners-Lee, W3C Director and inventor of the World Wide Web

 Ontario Universities' Application Centre

What will be reviewed:

1. What is **web accessibility**?
2. What is the Accessibility for Ontarians with Disabilities Act (**AODA**)?
3. Look at a summary of the Web Content Accessibility Guidelines (**WCAG**) 2.0.
4. Review some **tools** for assessing web accessibility.

 Ontario Universities' Application Centre

What is Web Accessibility?

According to the World Wide Web Consortium (**W3C**) Web Accessibility Initiative (**WAI**), "web accessibility means that people with disabilities can perceive, understand, navigate, and interact with the web, and that they can contribute to the web."

The WAI develops **strategies, guidelines** and **resources** to help make the web accessible to people with disabilities. One of the guidelines created by the WAI is the **Web Content Accessibility Guidelines (WCAG)**, which explains how to make web content more accessible.

The **WCAG 2.0** (December 2008) is the current version.

Web accessibility addresses the following needs:

- **Visual:** Visual impairments including blindness, low vision and colour blindness.
- **Mobility/Motor Skills/Physical:** Physical impairments such as difficulty or inability to use the hands, loss of muscle control or tremors, due to conditions such as cerebral palsy, Parkinson's disease and brain injuries.

Source: Wikipedia

- **Auditory:** Hearing impairments or deafness.
- **Cognitive/Intellectual:** Cognitive (affecting memory or attention), developmental and learning (such as dyslexia) disabilities.
- **Seizures/Neurological:** Diseases or conditions that may result in photo epileptic seizures in the presence of a flashing effect or visual strobe.

Some users may require **Assistive Technology (AT)**, which enables people to perform tasks that they were formerly unable to accomplish or had difficulty accomplishing.

Examples of Assistive Technologies:

- Screen reading software, e.g., JAWS
- Screen magnification software, e.g., ZoomText
- Braille translator
- Adaptive keyboard
- Mouth stick
- Text-to-speech software, e.g., Kurzweil

What is the Accessibility for Ontarians with Disabilities Act (AODA)?

Ontario Universities' Application Centre

The Accessibility for Ontarians with Disabilities Act, 2005 (**AODA**) became law on June 13, 2005.

Ontario Universities' Application Centre

Under this legislation, the government of Ontario has developed mandatory accessibility standards that **identify, remove and prevent barriers for people with disabilities** in key areas of daily living.

Ontario Universities' Application Centre

Accessible websites and web content fall within the **Integrated Accessibility Standards of the AODA**, 2005, under the **Information and Communications Standards** section.

Ontario Universities' Application Centre

As of June 3, 2011, the Integrated Accessibility Standards became Ontario regulation:

http://www.e-laws.gov.on.ca/html/source/regs/english/2011/elaws_src_regs_r11191_e.htm

Ontario Universities' Application Centre

Designated public sector and large organizations must make their internet websites and web content conform with the World Wide Web Consortium Web Content Accessibility Guidelines (WCAG) 2.0, initially at Level A and increasing to Level AA.

Ontario Universities' Application Centre

1. New internet websites and web content must conform with **WCAG 2.0 Level A** by **January 1, 2014**.

2. All internet websites and web content must conform with **WCAG 2.0 Level AA** by **January 1, 2021**.

 Ontario Universities' Application Centre

Success Criteria and Levels of Conformance

For each guideline, there are testable success criteria. There are three levels of success criteria: **A**, **AA**, and **AAA**. These are known as the **Levels of Conformance**.

 Ontario Universities' Application Centre

Level **A**: Minimum level of accessibility
Level **AA**: Enhanced level of accessibility
Level **AAA**: Additional accessibility enhancements

Each level builds upon the previous level. E.g., Level AA must satisfy all the Level A and Level AA success criteria.

Vision Simulation (colour deficiencies)

Simulation of red-green dichromacy
Condition: "Protanopia"
Affects: 1.2% of males, and 0.02% of females

Simulation of red-green dichromacy
Condition: "Deuteranopia"
Affects: 1.1% of males, and 0.01% of females

Simulation of blue-yellow dichromacy
Condition: "Tritanopia"
Affects: 0.001% of males, and 0.03% of females

<http://www.webexhibits.org/causesofcolor/2.html>

Ontario Universities' Application Centre

Examples of success criteria and level of conformance:

Guideline 1.4.1 Use of Colour: Colour is not used as the only visual means of conveying information, indicating an action, prompting a response, or distinguishing a visual element. (Level **A**)

Ontario Universities' Application Centre

Guideline 1.4.3 Contrast (Minimum): Text and images of text have a **contrast ratio** of at least 4.5:1. Large text (over 18 point or 14 point bold) has a contrast ratio of at least 3:1. (Level **AA**)

Ontario Universities' Application Centre

Guideline 1.4.6 Contrast (Enhanced):
Text and images of text have a **contrast ratio** of at least 7:1. Large text (over 18 point or 14 point bold) has a contrast ratio of at least 4.5:1. (Level **AAA**)

 Ontario Universities' Application Centre

Summary of WCAG 2.0

The **WCAG 2.0** has **12 guidelines** that are organized under these four principles:

1. **Perceivable**
2. **Operable**
3. **Understandable**
4. **Robust**

Also known as **POUR**.

 Ontario Universities' Application Centre

Principle 1: Perceivable

Information and user interface components must be presentable to users in ways they can perceive.

To perceive is to become aware of through the senses:

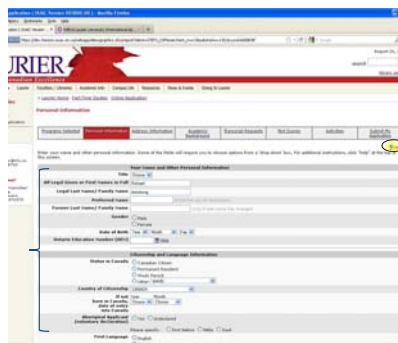

- sight
- hearing
- touch

 Ontario Universities' Application Centre

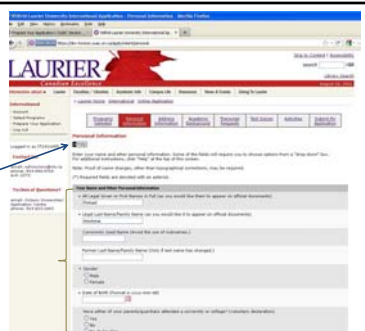

Perceivable (Guidelines)

1. **Text Alternatives:** Provide text alternatives for non-text content so that it can be changed into other forms people need, such as large print, braille, speech, symbols or simpler language. (1.1)
2. **Time-based Media:** Provide captions or other alternatives for multimedia. (1.2)
3. **Adaptable:** Create content that can be presented in different ways, including by assistive technologies, without losing meaning. (1.3)
4. **Distinguishable:** Make it easier for users to see and hear content (including separating foreground from background). (1.4)

Non-AODA compliant application: Placement of Help button and form field alignment

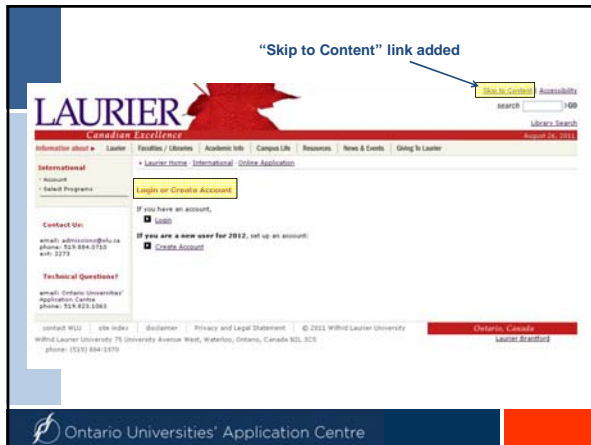

Left-aligned the Help button and all form elements

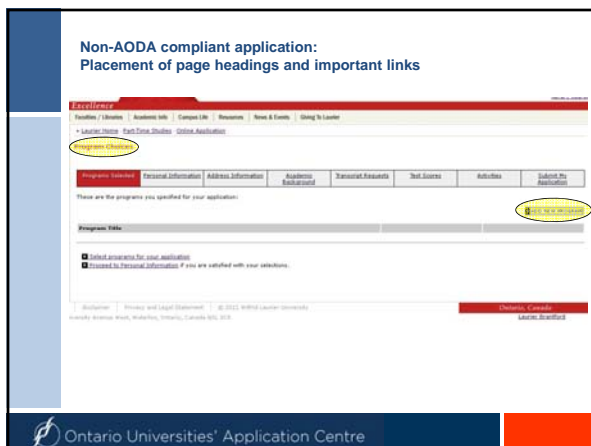

Principle 2: Operable

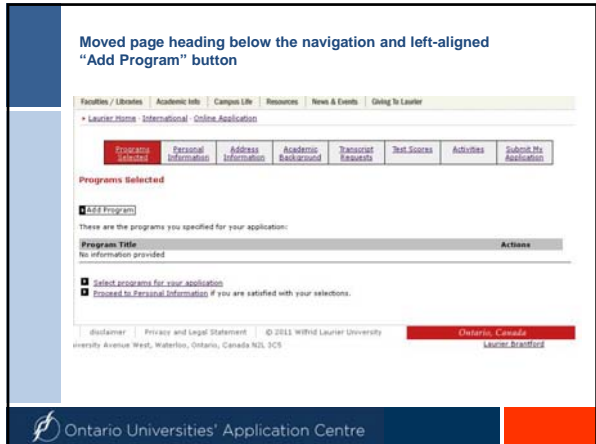

User interface components and navigation must be operable.

5. **Keyboard Accessible:** Make all functionality available from a keyboard. (2.1)
6. **Enough Time:** Provide users enough time to read and use content. (2.2)
7. **Seizures:** Do not design content in a way that is known to cause seizures. (2.3)
8. **Navigable:** Provide ways to help users navigate, find content and determine where they are. (2.4)

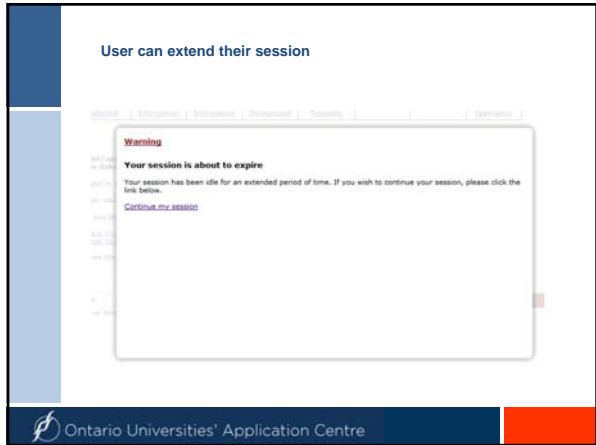

Moved page heading below the navigation and left-aligned
"Add Program" button

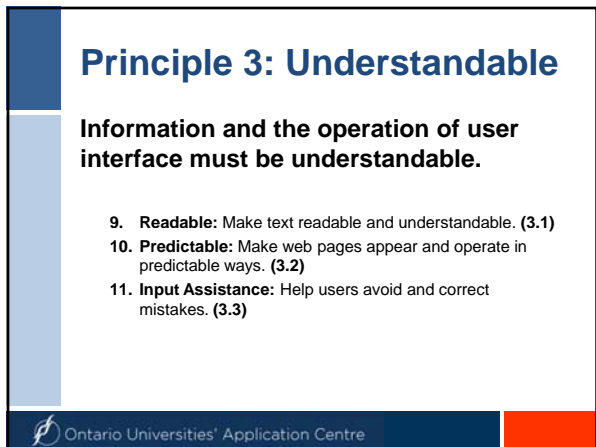

User can extend their session

Principle 3: Understandable

Information and the operation of user interface must be understandable.

- 9. **Readable:** Make text readable and understandable. (3.1)
- 10. **Predictable:** Make web pages appear and operate in predictable ways. (3.2)
- 11. **Input Assistance:** Help users avoid and correct mistakes. (3.3)

Shows error message at point of entry

Ontario Universities' Application Centre

Principle 4: Robust

Content must be robust enough that it can be interpreted reliably by a wide variety of user agents, including assistive technologies.

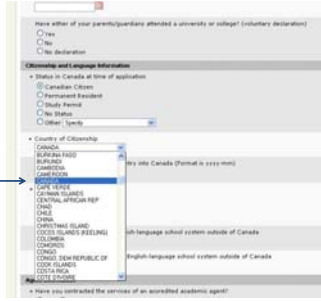

12. **Compatible:** Maximize compatibility with current and future user tools (assistive technologies). (4.1)

Ontario Universities' Application Centre

Tools for Assessing Web Accessibility

Ontario Universities' Application Centre

A user's desktop colour theme can affect the colour contrast on a website.

An example of zooming at 200% in Firefox (built in the browser):

Built in zoom for Internet Explorer 8 (up to 1000%):

Link

Make Sure Links are Recognizable
Distinguish links in the body of the page with underlines or something other than color alone.

Design Link Focus Indicators
Ensure keyboard users can visually identify a focused link. Use the standard dotted line or other non-color designators.

Design a "Skip to Main Content" Link
A link for keyboard users to skip navigation should be at the top of the page. It can be hidden, but should be visible when it receives keyboard focus.

Ensure Link Text Makes Sense on Its Own
Avoid "Click Here" in link text. Other ambiguous links, such as "More" or "Continue", can also be confusing.

Use Animation, Video, and Audio Carefully
If used, provide a play/pause button. Avoid flashing or scrolling content if not mouse activated.

Don't Rely on Color Alone
Because several other tools (designers or may override page colors, color cannot be the only way information is conveyed.

Design Accessible Form Controls
Ensure form controls have descriptive labels and instructions. Pay close attention to form validation errors and recovery mechanisms.
